

To ensure the best results from the LulzBot Mini2 3D printer we recommend installing the latest stable version of 3D printer firmware before the first print. In order to update your firmware:

- Download the latest version of Cura LulzBot Edition from [LulzBot.com/Cura](https://lulzbot.com/cura).
- Install Cura by following the specific instructions for your operating system.
- Start Cura by launching it from your list of installed applications.
- Add a new machine by selecting:

Settings > Printer > Add Printer.

- Select LulzBot Mini 2.
- Install the latest stable firmware by selecting:

Settings > Printer > Manage Printers > Update Firmware > Install Default Firmware.
