Revised 10/20

EZO-O2™

Embedded Oxygen Sensor

Reads	**Gaseous O^2**
Range	**0 – 42% (2x atmospheric O^2 levels)**
Calibration	**Factory calibrated**
Response time	**1 reading per second**
Resolution	**0.01**
Accuracy	**+/- 0.01 (0.02 PPT)**
Connector	**5 lead data cable**
Cable length	**1 meter**
Data protocol	**UART & I^2C**
Default I^2C address	**108 (0x6c)**
Data format	**ASCII**
Operating voltage	**3.3V – 5V**
Life expectancy	**~3.5 years**

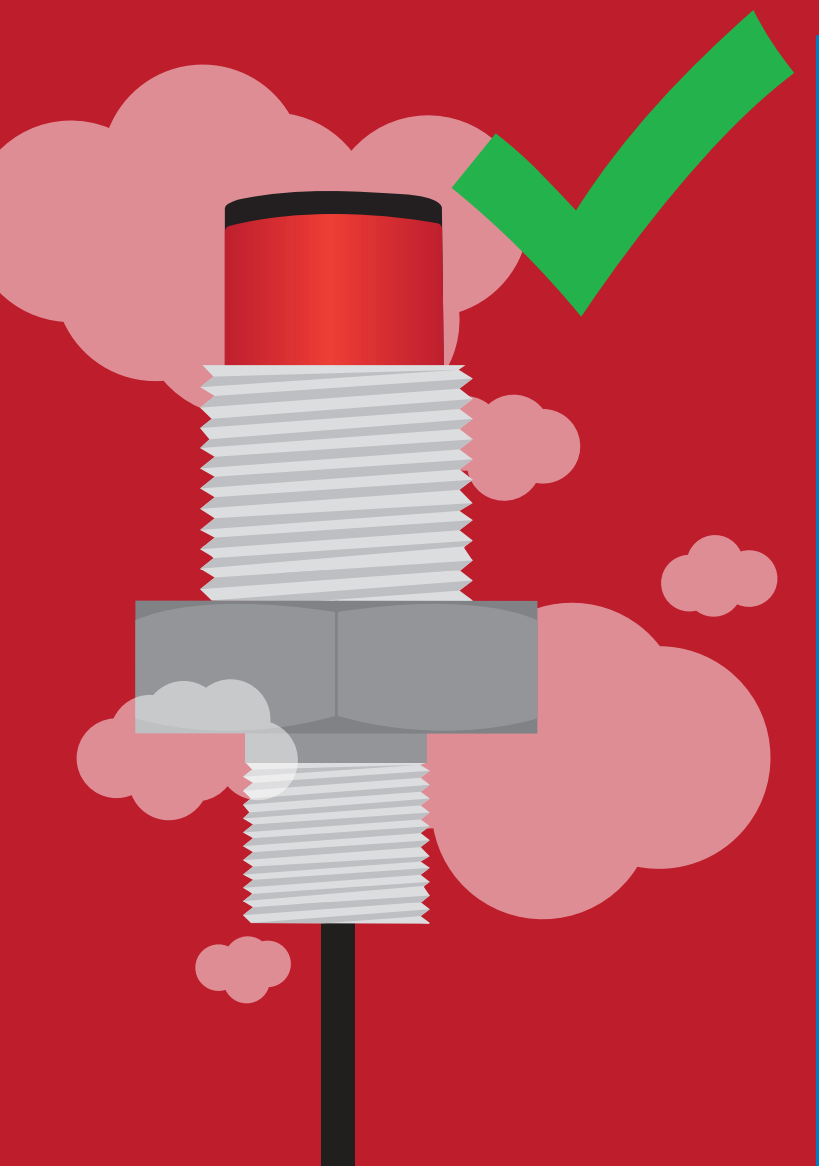
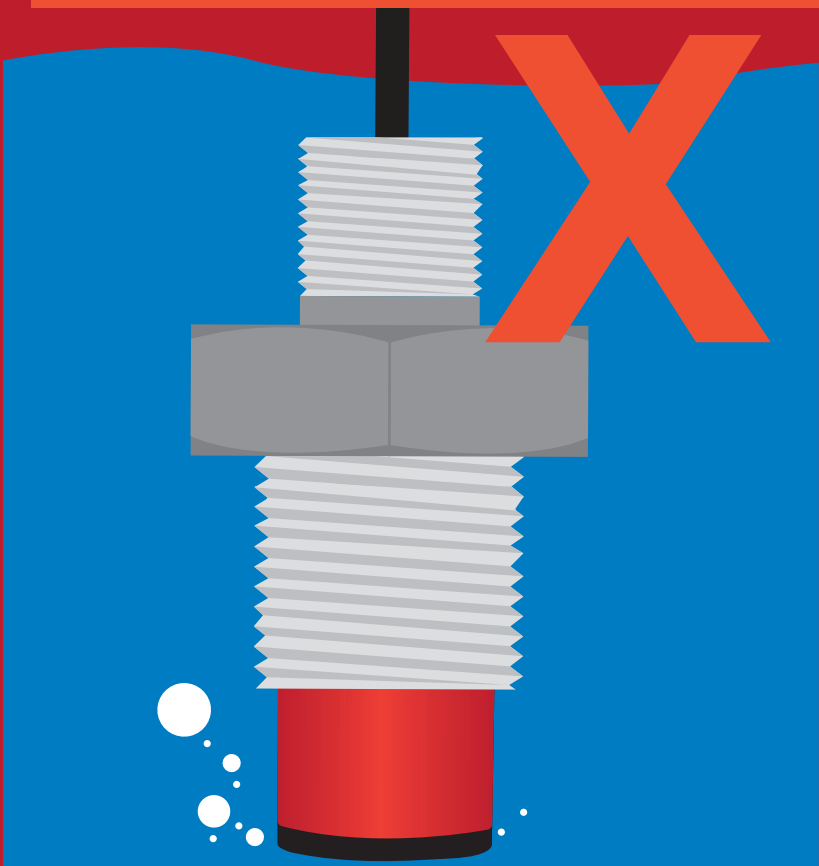
Attention

The EZO-O2™ is 100% operational out of the box.
CALIBRATION IS UNNECESSARY

This sensor detects GASEOUS O^2



This sensor does *not* read dissolved O^2

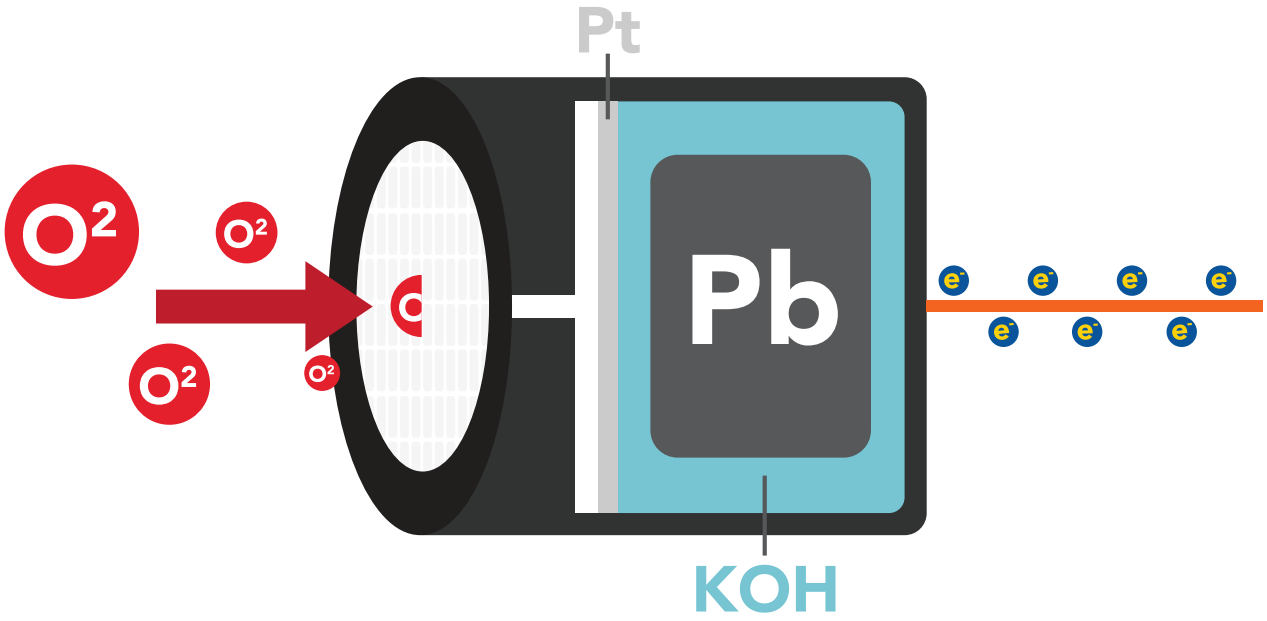


DO NOT SUBMERGE!

Click here for our line of Dissolved Oxygen sensors.

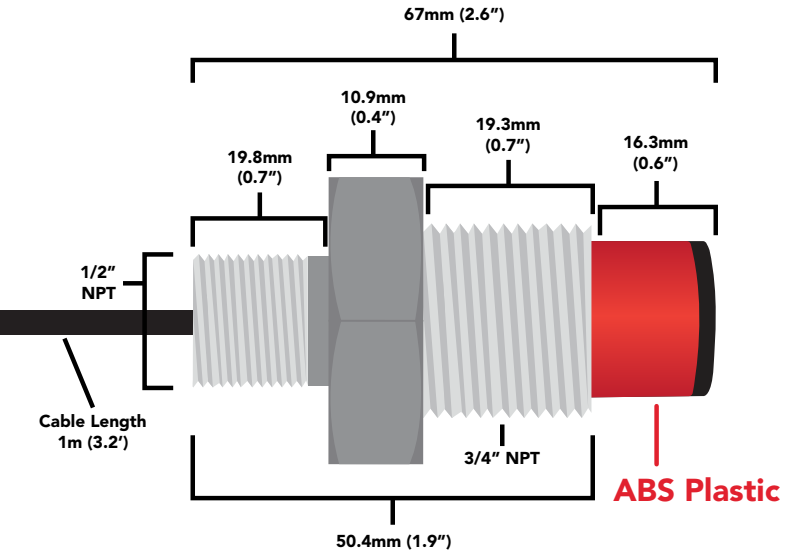
Operating principle

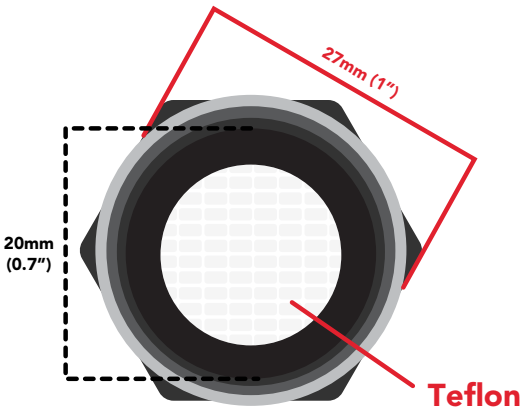
The Atlas Scientific EZO-O2™ Embedded Oxygen Sensor is an electrochemical sensing device that detects the partial pressure of oxygen through reduction. The sensor can be thought of as a small fuel cell. When the oxygen comes in contact with the sensor, the "fuel cell" begins to produce a current. A teflon membrane ensures that the oxygen enters the sensor at a steady rate.



Physical properties

The EZO-O2™ sensor only detects gaseous oxygen levels. This device cannot read dissolved O2 levels. *DO NOT SUBMERGE IN LIQUID.*





Weight 146g

Body 316 Stainless Steel

AtlasScientific™ Environmental Robotics

Pin out

Data and power cable pinout

White – RX/SCL
Green – TX/SDA
Black – GND
Red – VCC
Blue – ALM

The alarm pin will go high when a set O^2 level has been crossed.

If unused leave **ALM** floating. Do not connect **ALM** to **VCC** or **GND**.

See page **19** to enable O^2 level alarm in UART mode.
See page **43** to enable O^2 level alarm in I2C mode.

Power consumption

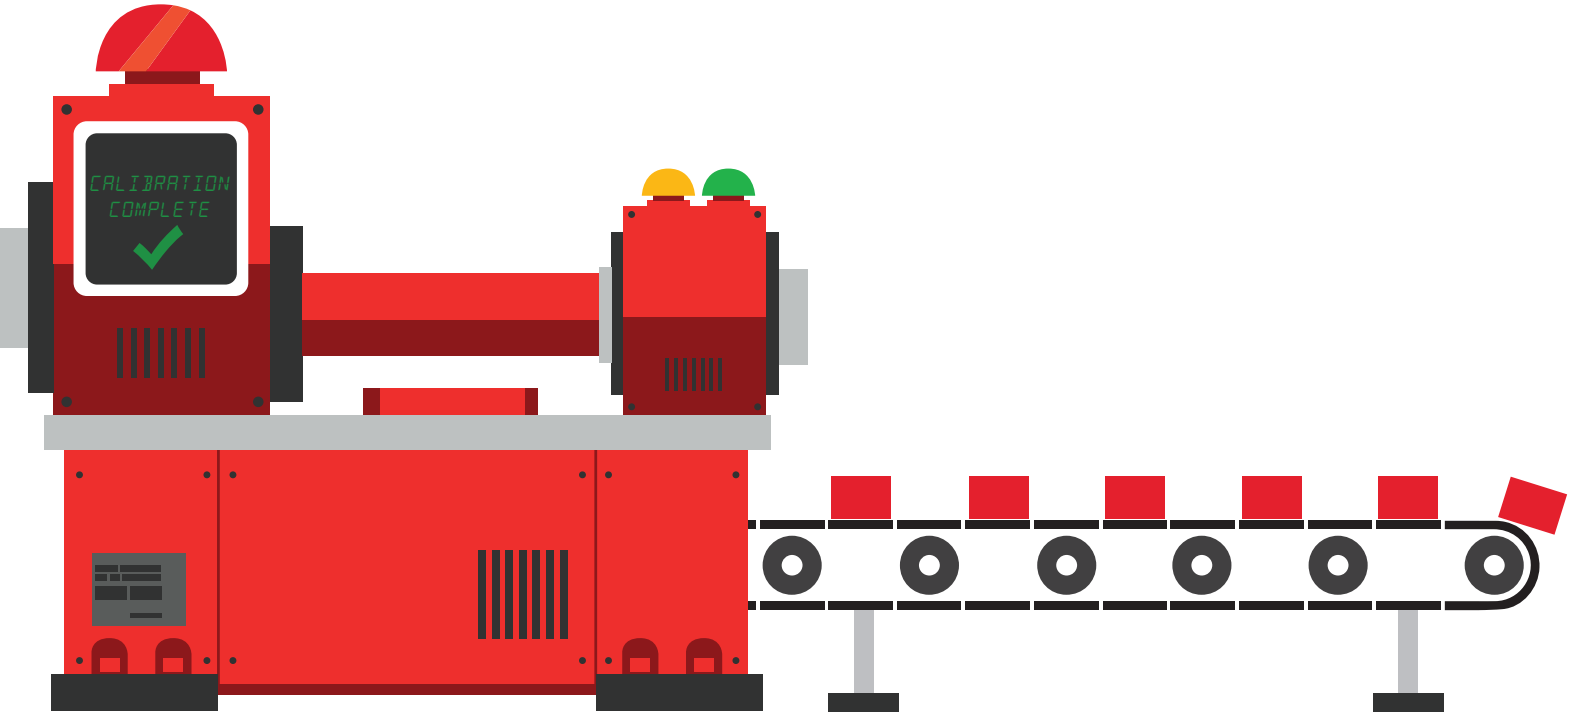
	LED	MAX	SLEEP
5V	ON	14.6 mA	0.5 mA
	OFF	13.9 mA	
3.3V	ON	13.7 mA	0.4 mA
	OFF	13.5 mA	

Absolute max ratings

Parameter	MIN	TYP	MAX
Storage temperature	-30 °C		75 °C
Operational temperature	-20 °C	25 °C	50 °C
VCC	3.3V	3.3V	5.5V

Calibration theory

The Atlas Scientific EZO-O2™ Embedded Oxygen Sensor comes pre-calibrated. As part of the manufacturing process Atlas Scientific performs a two-point factory calibration.



Low point calibration = 0% O^2
High point calibration = 20.95%

The factory calibration data is permanently stored in the sensor and cannot be erased.

Custom calibration

After ~12 months of operation the EZO-O2™ Embedded Oxygen Sensor may need to be re-calibrated. A simple single point recalibration to the atmospheric O^2 level is all thats needed.

Temperature compensation

Command syntax

Air temperature affects how the senor works, not the actual O2 concentration in the air.

T,n <cr> n = any value; floating point or int

T,? <cr> compensated temperature value?

RT,n <cr> set temperature compensation and take a reading

Example	Response
T,19.5 <cr>	*OK <cr>
RT,19.5 <cr>	*OK <cr> 20.95 <cr> Temperature compensated O2 reading
T,? <cr>	?T,19.5 <cr> *OK <cr>

Enable/disable parameters from output string

Command syntax

O, [parameter],[1,0]	<cr>	enable or disable output parameter
O,?	<cr>	enabled parameter?

Example	Response
O,PPT,1 / O,PPT,0 <cr>	*OK <cr> enable / disable PPT
O,%,1 / O,%,0 <cr>	*OK <cr> enable / disable percent concentration
O,? <cr>	?,O,%,PPT <cr> if both are enabled

Parameters

PPT	O^2 in parts per thousand
%	O^2 in percent concentration

Followed by 1 or 0

1	enabled
0	disabled

* If you disable all possible data types your readings will display "no output".

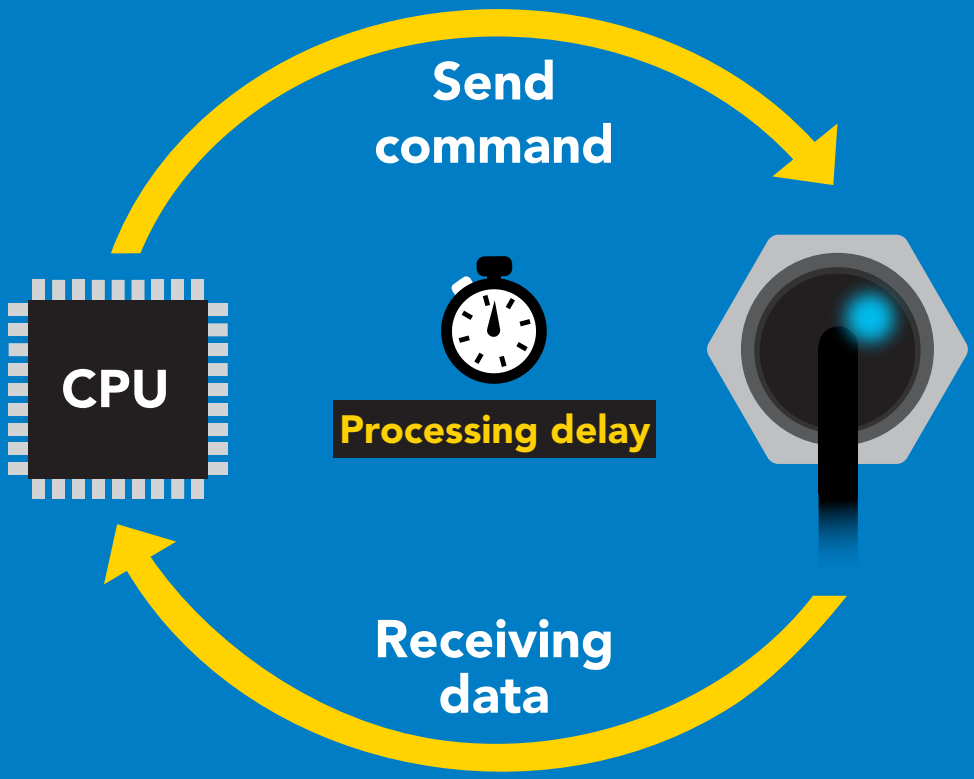
Response codes & processing delay

After a command has been issued, a 1 byte response code can be read in order to confirm that the command was processed successfully.

Reading back the response code is completely optional, and is not required for normal operation.



Example

```
I2C_start;
I2C_address;
I2C_write(EZO_command);
I2C_stop;

delay(300);   Processing delay

I2C_start;
I2C_address;
Char[ ] = I2C_read;
I2C_stop;
```

If there is no processing delay or the processing delay is too short, the response code will always be 254.

Response codes

Single byte, not string

255	no data to send
254	still processing, not ready
2	syntax error
1	successful request

Datasheet change log

Datasheet V 1.3

Revised naming device info on pages 23 & 47.

Datasheet V 1.2

Revised info for "Pin out" on page 5.

Datasheet V 1.1

Revised info for the Alarm command on pages 19 & 43.

Datasheet V 1.0

New datasheet

Firmware updates

V1.0 – Initial release (June 3, 2020)

V1.01 – Initial release (June 18, 2020)
- Fixed bug with the alarm command not working in certain circumstances.

Warranty

Atlas Scientific™ Warranties the EZO-O2™ Embedded Oxygen Sensor to be free of defect during the debugging phase of device implementation, or 30 days after receiving the EZO-O2™ Embedded Oxygen Sensor (which ever comes first).

The debugging phase

The debugging phase as defined by Atlas Scientific™ is the time period when the EZO-O2™ Embedded Oxygen Sensor is connected into a bread board, or shield. If the EZO-O2™ Embedded Oxygen Sensor is being debugged in a bread board, the bread board must be devoid of other components. If the EZO-O2™ Embedded Oxygen Sensor is being connected to a microcontroller, the microcontroller must be running code that has been designed to drive the EZO-O2™ Embedded Oxygen Sensor exclusively and output the EZO-O2™ Embedded Oxygen Sensor data as a serial string.

It is important for the embedded systems engineer to keep in mind that the following activities will void the EZO-O2™ Embedded Oxygen Sensor warranty:

- **Soldering any part to the EZO-O2™ Embedded Oxygen Sensor.**
- **Running any code, that does not exclusively drive the EZO-O2™ Embedded Oxygen Sensor and output its data in a serial string.**
- **Embedding the EEZO-O2™ Embedded Oxygen Sensor into a custom made device.**
- **Removing any potting compound.**

Reasoning behind this warranty

Because Atlas Scientific™ does not sell consumer electronics; once the device has been embedded into a custom made system, Atlas Scientific™ cannot possibly warranty the EZO-O2™ Embedded Oxygen Sensor, against the thousands of possible variables that may cause the EZO-O2™ Embedded Oxygen Sensor to no longer function properly.

Please keep this in mind:

1. **All Atlas Scientific™ devices have been designed to be embedded into a custom made system by you, the embedded systems engineer.**

2. **All Atlas Scientific™ devices have been designed to run indefinitely without failure in the field.**

3. **All Atlas Scientific™ devices can be soldered into place, however you do so at your own risk.**

Atlas Scientific™ is simply stating that once the device is being used in your application, Atlas Scientific™ can no longer take responsibility for the EZO-O2™ Embedded Oxygen Sensor continued operation. This is because that would be equivalent to Atlas Scientific™ taking responsibility over the correct operation of your entire device.
