*3. The mechanical endurance was measured at a switching frequency of 18,000 operations/hr.

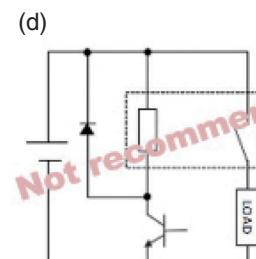

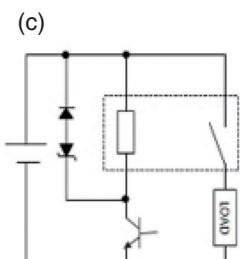

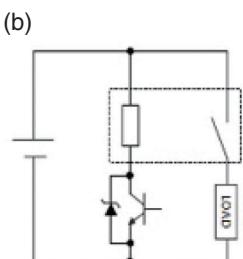

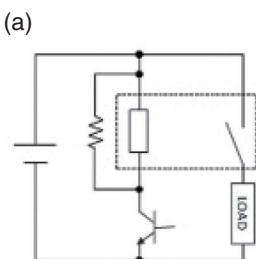

*4. Please connect N.O terminal to the +BATT side and connect surge suppression element in parallel between coil based on recommended circuit.

Recommended circuit: (a), (b), (c)

Not-recommended circuit: (d)

Note:

OMRON recommends coil driver circuit (b) and (c) for coil surge suppression. However the circuit (d) is not recommended because it may negatively affect the durability performance.

●Must-operate Voltage and Must-release Voltage Distributions

(Number of Relays × Percentage of Rated Voltage)

●Time Characteristic Distributions

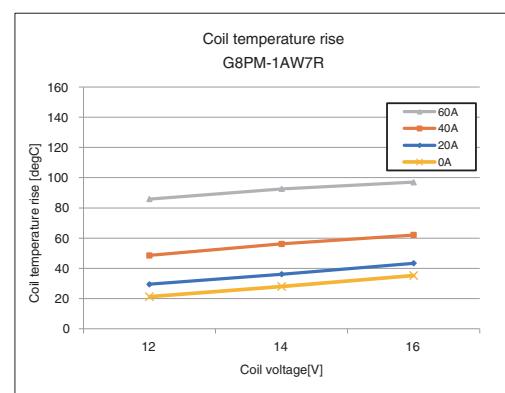

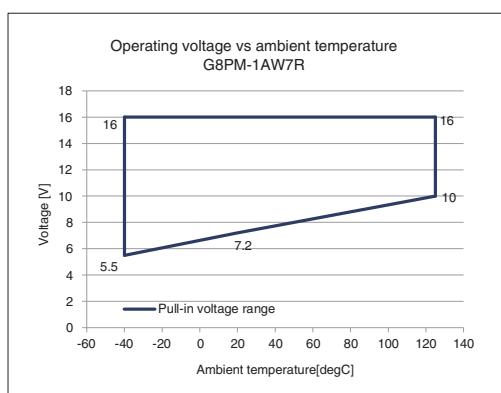

(Number of Contacts × Time (ms))

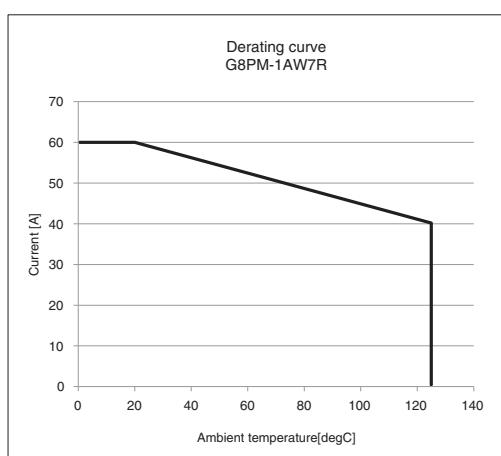

●Operating voltage vs ambient temperature (Cold start)

●Coil temperature rise [degC] at 20°C

(For using under a higher ambient temperature, please select the proper current carrying condition to avoid a possible excessive temperature rising.)
